1	10	I believe that we have to move past race. I do not think that this resolution promotes that goal.
2	17	This is essential to enhance the recruitment and advancement of people of color, which will translate to better patient outcomes.
3	24	IT WOULD BE USEFUL
4	30	Should include data about women
5	34	Good idea, but adds administration burden
6	40	Not or issue. Let state get these stats together
7	41	Very important! Surprising it doesn't already happen, but it clearly needs to.
8	45	I agree
9	31	This itself is racist. Let's have medical education and providers based on quality.
10	47	race should not be used....subjective....ethnicity would perhaps be appropriate, but data such as this may lead to quotas or be used as criteria for promotion, acceptance rather than merit
11	32	The ability to "refuse to answer" race or ethnicity questions is a right. My biracial children, who have career interests in health care, prefer to refuse to answer these questions. Their racial background could be confusing to document anyway, and know they are not alone. The amount of data accuracy and "transparency" requested may need explanation.
12	59	The resolution does not state who should receive the data on race and ethnicity. I believe that students' merit and educational qualifications are more important than race and ethnicity.
13	62	How does this translate into policies that equal opportunity be offered REGARDLESS of religion, race, ethnicity, or sex? Does this mean that one particular religion, race, sex, or ethnicity will either be preferred, or given less consideration, because of their religion, race, ethnicity, or sex? What is the purpose of this resolution?
14	71	I strongly agree

15	73	I am against any admission or hiring standards based on race or ethnicity. Admission and hiring standards should be based on merits. Showing this data will cause less qualified candidates to be taken over more qualified candidates.
16	74	Great idea. Need to know in order to analyze
17	79	This is a good idea that will help perspective students compare the cultures between schools.
18	83	I agree with the proposal. It is a timely effort to level the playing field for underrepresented students and faculty at medical schools.
19	84	I don't believe that adding this information will advance the authors' interests. Moreover, it may be not be actionable. Lastly it may be harmful in that race/ethnicity is sometimes self-selected and inaccurate.
20	87	Should be a national issue for reporting of this information, so should go to the AMA. But collecting the data is only one step and does not ensure institutional change. Also the most deserving candidates should be promoted, not based on any type of affirmative action. Politically correct issue for the time..
