1	10	I am not sure that we can really add anything here.
2	14	Support but concerned about cost.
3	22	Ideas are good but cost may be too high at a time when we have to prioritize our resources
4	24	VERY GOOD RESOLUTION
5	41	Timely and important!
6	44	Another good idea. But where will the funding come from. I suppose we need to be prepared for these once in a century events, but how often will these models need to be updated in view of the fact that the State's population demographics are changing rapidly.
7	45	I agree
8	31	We are not likely to have another pandemic in our lifetime. Nor would we know who it could affect the worst until it is here. There certainly should be less politicization of any medical emergencies.
9	47	I am a rural provider and oppose this
10	32	Appears intricate, a public health index as described difficult to execute, and full of controversy. Sure, see if can do this in a drill preparing for our next pandemic.
11	62	One doesn't have to do a study to know where the vulnerability is. We all know where the areas of limited resources are, so giving universities more money and developing complicated algorithms is just like "setting up another committee". Above all while this gives academics something to do, it does not provide for implementation. I would support have advance planning making sure testing sites, PPE, and other resources are available to those living in known vulnerable areas. More importantly, I would like to have accountability and reporting regarding implementation.
12	69	Get rid of the word "support."
13	73	I am not sure what this entails.
14	79	Would like to see what the vulnerability index metrics are. But the concept sounds like a good idea.
15	83	It is always a worthwhile effort to administer care to those individuals and communities that seem to always lack suitable resources. Several people have been quoted in the

		past as espousing that the best way to judge the positive evolution of civilization, is by the way it treats its most vulnerable members.
16	84	I support the concept, but there is no money available to accomplish this.
17	86	Support and advocate does not cost a lot of money.
18	87	Any type of Vulnerability Index would need to be researched and it would need to be determined if this would lead to the most equitable use of resources. The index idea would need to be proven before we would be able to support actions based on such an index.
