COVID lockdowns worsened substance abuse in adolescents. Permissiveness of substance abuse is as much a cultural and sociological phenomenon as medical. Licensing Barriers, does that mean opening up scope of practice?

Absolutely true we need a lot more sadly that we need it to begin with

The treatment of addiction is not only limited to Medical treatment. Isms should support longer term relational psychoanalytic-based therapies and not just pharmaceutical.

I am not sure what is meant y "artificial and licensing barriers to outpatient addiction medical treatment of adolescents" there have been a lot of inappropriate non-medical treatment centers for addiction.

Agree

With who's money?

Important to try to save our children and rescue them from a life of dependence on drugs.

Agree

Extremely important and urgent matter

See my prior comments. Addiction treatments fail at an unjustifiably high rate.

Easy to say, hard to get done!!

People seem to prefer to "trust science" rather than do the hard and painful labor of disciplining the adolescents. They are ready for the medical profession to be a god to them, and the blind profession appears ready to fantasize that we can be. This increasing medical-izing of sinful behavior under the guise of mental health is bringing us all to utter disaster.

Seems like we already have this issue addressed.

Agree

Rural population suffers the most and waits in emergency rooms and hospitals for days and weeks to get into any meaningful programs because they are all full ! We need more personnels and more places to take care of adolescents

Band aid policies are singing I can never support. Go ahead stab yourself, we will provide you with a band aid!

Agree with this.

I also agree in principle but we should not burn our ISMS resources. OK to support in writing and that is it. Low priority.

Excellent!
