

**DID YOU  
KNOW?**

**75% of people who are infected  
with Hepatitis C don't know it?**

*Hepatitis C is a serious condition that often leads to liver disease. It is curable for most patients, but many people don't seek treatment because they don't know they have it.*

*Symptoms of Hepatitis C often don't show up for decades,  
and by then it's often too late.*

- **Were you born between 1945 and 1965?**
- **Have you injected illegal drugs, even once?**
- **Have you received clotting factor concentrates made before 1987?**
- **Did you receive a blood transfusion or solid organ transplant before July of 1992?**
- **Were you exposed to bodily fluids from someone with Hepatitis C, including health care workers after accidental needle sticks involving infected individuals?**
- **Are you infected with HIV?**
- **Were you born to a Hepatitis C-positive mother?**
